

1.4 Compound interests

The very useful **Finance Solver** can be used for various compound interest problems. We will first present you the solver, and then do an example.

1.4.1 Presentation of Finance Solver

To access it, press , select Finance > Finance Solver:

The screenshot shows the Finance Solver interface with the following fields:

- N: 0.
- I(%): 0.
- PV: 0.
- Pmt: 0.
- FV: 0.
- PpY: 1

Below the fields, it says: "Press ENTER to calculate Number of Payments, N"

N is the total **N**umber of compounding periods (years \times compounding periods per year).

I(%) is the **I**nterest rate (in percentage, so entering 5 means “5%”).

PV is the **P**resent **V**alue (the value at the start of the loan).

PmT is the **P**ay**M**en**T** at each period.

FV is the **F**inal **V**alue (the value at the end).

PpY is the **P**ayments per **Y**ear.

CpY is the **C**ompounding periods per **Y**ear.

PmTAt is to set **P**aymen**T**s due **A**t the beginning or the end of each period.

Enter cash inflows as positive numbers and cash outflows as negative numbers

1.4.2 Example of computation

You have found a car you would like to buy. You can afford payments of 250\$ at the end of each month for four years. The car costs 9,000\$. Your bank offers an interest rate of 5%, compounded monthly. What will your payments be? Can you afford it?

① Press , select Finance > Finance Solver, and fill the app the following way:

N:	48	▶
I(%):	5	▶
PV:	9000	▶
Pmt:	0	▶

PV is positive because the car counts as cash inflow

FV:	0.	▶
PpY:	12	▲▼
CpY:	12	▲▼
PmtAt:	END	▶

FV is zero because we want to pay for the whole cost of the car at the end

② Select the value that you want to know (here: **PmT**), and press . The following should be displayed:

Finance Solver

N:	48	▶
I(%):	5	▶
PV:	9000	▶
Pmt:	-207.26364213582	▶
FV:	0.	▶
PpY:	12	▲▼

Edit Payment, Pmt

The **Pmt:** rectangle indicates the value solved

Thus, you **can** afford the car since you would have to pay more or less 207.25\$ (it is displayed as a negative number since it is an outflow of cash) per month, which is less than 250\$!
